BLEED

THIS AREA WITHIN THE GREY BOX WILL DISPLAY ON THE FRONT OF THE FRAME.

CUSTOM CANVAS PRINTS

Finished Product Size: 24" wide by 30" high

SMARTPRESS

BLEED - Your file needs to include a 3" bleed necessary for production. It overlaps the edge of the canvas print by a large amount on all sides so that the artwork can wrap around to the back of the frame. This template shows an extra 3" of bleed on all sides, to accommodate a 2" frame. 1.5" frames should have 2.5" of bleed, and low profile frames should have 1.75" of bleed on all sides. If you do not provide enough bleed, we will do our best to center your artwork on the front of the frame, but there will be a white area visible wherever your artwork ends.

SAFE MARGIN - This sample document is setup as a 24x30 canvas wrap for a 2" frame. The grey area is the front facing portion of your print, after it has been wrapped around the frame of your choice. When you enter dimensions in Smartpress.com, always enter dimensions for the frontfacing side. Because canvas wraps need a large amount of image to wrap around the frame, the actual document size is much larger than the width and height which you order, and has a larger bleed area than any other type of printing that you might order. Pay close attention to the notes on this page regarding page size and bleed as this is critical to producing a good canvas wrap.
