

SMARTPRESS

# 2-sided 9ft SABRE FEATHER FLAG

**BLEED:** Your file needs to include a 1” bleed necessary for production. Bleed is printing that goes beyond the edge of the sheet after trimming. If a bleed is not included in document setup, there is a good chance there will be a gap between the edge of the printed area and the cut line. This happens because there is a tolerance when cutting the printed piece. For more information on the importance of bleed, visit our website: [smartpress.com/support/printing-basics/bleed-borders](https://smartpress.com/support/printing-basics/bleed-borders).

**CUT LINE:** This is where your artwork will be trimmed. This is extra space needed for stitching.

**FINISHED SIZE:** This is the finished product size.

**SAFE MARGIN:** Your file needs to include a 1.25” to 2” of safe margin necessary for production. Safe margin is the area around the edge of the sheet. If the safe margin is not included in document setup, there is a chance that the art close to the edge will get cut off due to machine shift during cutting. This happens because there is a tolerance when cutting the printed piece. For information on how to account for cutting on your print file, visit our website: [smartpress.com/support/printing-basics/cutting-tolerance](https://smartpress.com/support/printing-basics/cutting-tolerance).

**FINAL FILES:** When exporting your final PDF, turn off the **Document Setup** layer. The lines and text on the *Document Setup* layer are for position only, to help you layout your art. Your final art should be on the *Your Art Here* layer.
